Dear Hiring Manager,

I am writing to express my strong interest in the GDS Cyber – Frontier AI Layered Defense – Staff Consultant position at EY. As a BCA graduate in Artificial Intelligence & Data Science from V.L.B. Janakiammal College of Arts & Science (Bharathiar University), I offer a solid foundation in AI/ML engineering, cloud architecture, and data-driven problem solving aligned with modern cybersecurity demands.

During my academic journey, I built "Scrap Cloud," a scalable full-stack digital scrap collection platform (Python, Flask, MySQL, Bootstrap 4, Google Maps API). Through this project, I focused on system architecture, database optimization across 6 tables, and implementing secure API integration and user data protection across 15–18 screens. Furthermore, during my Python internship at Safe Technology, Palakkad, I gained hands-on experience in production-grade code optimization and data analysis.

To complement my degree, I have acquired industry certifications in Microsoft Fabric, Azure OpenAI, and MongoDB/Al Vector Search (ICT Academy). My coursework and hands-on projects have prepared me to understand the intersection of generative AI systems and security vulnerabilities, such as prompt injection, data poisoning, and secure vector search pipeline design.

I am eager to contribute my technical adaptability, analytical skills, and passion for AI security to EY's Cyber practice. Thank you for considering my application. I welcome the opportunity to discuss how my background aligns with your team's goals.

Sincerely,

Anamika E
